

Tingo Universale

Concentrated colorant for all types coating systems indoor

Tingo Universale is a concentrated colorant solution to be added to any type of water or solvent-based primer or lacquer.

It allows for the creation of an infinite range of color shades by combining the different versions, all of which are fully compatible and mixable in any proportion.

Available in wood tones such as oak, doussié, teak, mahogany, walnut, wengé, and black, as well as in special colors like red and blue.

Application Instructions

Shake the product well before use.

The product should be added up to a maximum of 15% to the lacquer or coating product to be used. Typically, a coloring cycle involves two base coats, with light sanding using fine grit in between, followed by one protective transparent topcoat. Sanding the first coat is essential when using water-based lacquers, which tend to raise the wood grain.

Coloring large surfaces, such as floors, is a delicate task. It is advisable to carefully blend transition areas to avoid more intense overlaps. The best results are obtained by adding Tingo Universale to solvent-based sealers, which allow better blending between adjacent areas. Lighter shades are generally easier to apply than intense colors.

Tingo Universale Doussié, when added in small quantities to the first coat, helps mask traces of silicon often present in doussié wood.

Notes

Shake the product well before use.

Tingo Universale is not suitable for use in oil-urethane paints, paste waxes, or oil-based products in general.

Safety Regulations

For professional use only. Strictly follow the label instructions and consult the safety data sheet before using the product.

Disposal

Dispose of unused product and empty containers in accordance with current local regulations.
